

**National Special Events Data Call
Background Information
Office of Operations Coordination
Department of Homeland Security**

Last updated: July 11, 2019

The Department of Homeland Security (DHS) Special Events Program (SEP) manages the National Special Events Data Call (NSEDC). The NSEDC is an annual process that relies on the voluntary participation of the 56 states and territories to collect information on events occurring in their jurisdictions. The NSEDC covers the period from December 1 of the current year through November 30 of the following year. The primary data collection period opens in early August and remains open for six weeks before closing in mid-September. The NSEDC is conducted using the Special Events Working Group (SEWG) Community of Interest (COI) on the Homeland Security Information Network (HSIN), and Homeland Security Advisors (HSA) or their proxies are the ultimate authority for their state's participation in the NSEDC.

- The 2020 NSEDC will include events that occur between December 1, 2019 and November 30, 2020.
- The 2020 NSEDC will open on August 1, 2019 and close on September 12, 2019.

Using the data collected through the NSEDC, the Special Event Assessment Rating (SEAR) Methodology, a risk-based analytical approach applied to all events submitted to the NSEDC. The five SEWG Co-Chairs review the event information and results of the analysis, and adjudicate final SEAR levels for all special events. SEAR levels are used by the majority of the U.S. Government to inform policy decisions on support to special events. SEAR levels are shared with the state where the event is occurring (but not across state lines), SEWG, and other federal partners. There is no federal funding attached to the SEWG or DHS SEP however, the State Homeland Security Program (SHSP) and Urban Area Security Initiative (UASI) risk methodology, managed by the Federal Emergency Management Agency (FEMA), includes a special event metric as part of its Soft Target Index.

There are five SEAR levels:

- SEAR 1: A significant event with national and/or international importance that may require extensive federal interagency support.
- SEAR 2: A significant event with national and/or international importance that may require some level of federal interagency support.
- SEAR 3: An event of national and/or international importance that requires only limited federal support.
- SEAR 4: An event with limited national importance that is managed at the state and local level.
- SEAR 5: An event that may be nationally recognized but generally has local or state importance.

Events may be submitted outside of the NSEDC. These events are called short-notice events and include events that were unplanned at the time of the NSEDC. Short-notice events are submitted via the National Special Events Database accessed through the SEWG COI on HSIN and undergo the same analytical process and SEWG Co-Chair adjudication as those submitted during the NSEDC.
